TECHNICAL SKILLS

- Languages** : Python, HTML & CSS, SQL
- Frameworks** : Wireshark, Nmap, MITRE ATTACK
- Cybersecurity** : Vulnerability Assessment, Incident Response, Threat Management
- Soft Skills** : Communication, Problem-Solving, Teamwork, Adaptability

EXPERIENCE

Web Developer– College Portal

Aug 2025 – May 2026

<https://ims.fcrit.ac.in/>

- Developed and maintained the live college portal (PHP, MySQL) serving students, faculty, and administration.
- Migrated the existing PHP codebase to Laravel, adopting MVC architecture and Eloquent ORM for improved maintainability.
- Hardened portal security by patching file-upload vulnerabilities and implementing server-level defence-in-depth measures.

Freelance Python Developer

2024– 2025

Uttkarsh Minds

- Developed a dynamic quiz platform using Python and Flask to automate assessments.
- Implemented Excel-based data ingestion and quiz generation workflows.

EDUCATION

Fr. Conceicao Rodrigues Institute of Technology

B.E in Information Technology

2023 – 2027

Vani Vidyalaya College of Science and Commerce

Higher Secondary (12th), Science

Jun 2021– May 2023

PROJECTS

Cyberwatch AI– SOC-Style Threat Intelligence Platform

Python, Flask, SQLite, JS

[Github](#)

- Real-Time Threat Intelligence: Integrated CISA KEV, NVD CVE, URLhaus, Cloudflare Radar, and sensor feeds to collect and normalize live cybersecurity data.
- SOC Monitoring Dashboard: Built a Flask/JavaScript dashboard with rotating geolocation globe, live event streaming, incident correlation, severity-based alerts, and analyst investigation workflows.

Phishing Detection System

Python, Machine Learning

[Github](#)

- Developed a machine-learning phishing detection system for URLs, emails, and SMS messages using URL features, content analysis, metadata, and security heuristics.
- Implemented explainable risk scoring that identifies suspicious patterns such as malicious redirects, domain impersonation, urgency, credential requests, and phishing keywords.

AutoVuln Scanner

Python, Flask, Nmap, SQLite, NVD API

[Github](#)

- Built a full-stack vulnerability scanner using Flask, Nmap, and SQLite that detects open ports, service versions, SQL injection, XSS, missing security headers, and directory exposure.
- Integrated NVD CVE/CVSS intelligence with live scan monitoring and PDF/HTML reporting, enabling users to track vulnerabilities and generate actionable security assessment reports.

LEADERSHIP

Joint Creative Head, AIDL Club

Fr. Conceicao Rodrigues Institute of Technology

June 2025– June 2026

- Designed promotional posters and creative content for various club events.
- Led a team to plan and execute event branding and outreach.

ACHIEVEMENTS

Finalist – KnowCode 3.0

Project: APIBazaar – Cloud-Native API Deployment Platform

2025

- Built a platform that transforms API documentation into live, deployable services instantly using Kubernetes and Docker.
- Designed an automated pipeline to parse API specifications and provision containerised endpoints on demand.

CERTIFICATIONS

- Career Essentials in Cybersecurity – Microsoft & LinkedIn
- Cybersecurity Fundamentals – IBM SkillsBuild
- Cybersecurity Job Simulations – Deloitte, PwC US, Tata Group
